**Higher sales.
Improved cash flow.
Increased customer loyalty.**

HiSpeed Solutions

Serve your customers faster

Our most popular devices use a high-speed connection to process debit and credit transactions, so you can serve your customers more quickly. Not only are these terminals cost-effective because they eliminate the need for a separate phone line, they also provide you with:

- **Reduced wait times.** Enjoy transaction speeds up to 50% faster than dial-up. That means shorter lines and less risk of customers leaving without buying.
- **Enhanced security.** The automatic dial back-up feature ensures customers can pay even if your Internet service is interrupted.

eSELECTplus[®] Virtual POS Solution

Profit from its versatility

Now you can use your existing computer and high-speed Internet connection to process card payments from your Web site or face-to-face. Choose any of the available eSELECTplus modules – Virtual Terminal, Card Present, eCommerce, Recurring Payment, Batch Processing, and Enhanced Data – and get these benefits:

- **Easy set-up, minimal investment.** Leverage your PC and web browser – there's no software to buy or install.
- **Protection for you and your customers.** All transactions are authorized securely in real-time.

Short Range Mobile Solution

Bring payment right to your customer

Now your customers can pay right on the spot. Our short range wireless solution has a range of up to 60m inside and up to 120m outside, so customers can pay by debit or credit from virtually anywhere within your establishment. Other advantages include:

- **Lower costs.** Eliminate costly dial-up lines and add up to seven terminals to a single IP line.
- **Increased revenue.** By serving your customers faster – wherever they are – you can help prevent lost sales due to long wait times.

Interactive Voice Response Solution

Save with telephone processing

If you would like to start accepting credit cards or if you handle only a few transactions per month, our Interactive Voice Response (IVR) solution is the way to go. With IVR, you can authorize and process credit transactions over the phone at your convenience. And take advantage of these benefits:

- **Higher sales.** More payment options for your customers means more potential revenues for you.
- **Lower expenses.** Since IVR works with virtually any touch-tone phone, a separate POS terminal is not required.

Long Range Mobile Solution

Take payment even further

Make it easy for your customers to pay wherever they are – at your location, in the car, or at their door. By accessing the national 1X digital communication network, you can connect your customers and their cards for payment virtually anywhere in Canada. Plus you get:

- **Power and portability.** The long range terminal is a compact, lightweight, all-in-one device that features a built-in PIN pad and printer.
- **Higher Security.** Accepting cards for payment reduces the risk of loss and theft associated with cash and cheque payments at mobile locations.

Gift Card Program

Attract new customers and increase sales

Whether your business is big or small, gift cards are a great way to grow your sales. Moneris makes it even easier by customizing your card with your name and logo. You'll get added exposure in the marketplace, and so much more:

- **More customers, more profits.** For every customer who gives a gift card, you have the opportunity to create one new customer. Plus gift card users rarely spend just the amount on the card.
- **Convenience.** Gift cards can be processed easily with your Moneris POS terminal.
